HEATING TECHNOLOGY

DTEK
DIVING EQUIPMENT

HEATING VEST

- Top made of highly thermal fabric in three layers with internal breathable and thermal reflective membrane "ZERO WIND" thermally equivalent to 320 gr.
- Possibility to use it in combination with our heating plates, through connection E/O cord with 12 V battery packets.
- External cable for battery packet connection hidden when not used.
- Suitable in standard version for temperate climates and in heating version for extremely cold climates.
- Internal fabric with sponge making to maximize the transpiration.
- Sleeve Raglan cut to ease the freedom of movement of arms.
- Arm with thumb finger ring to hold it in place.

HEATING PANTS

- Pants with pre-formed knees, made of highly technical fabric in three layers, thermally equivalent to 320 gr and with internal breathable and thermal reflective membrane "ZERO WIND".
- Internal fabric with sponge making to maximize the transpiration.
- Pockets on the sides.
- Stretchable adjustable waist with coulisse.
- Suitable for diving activity and all outdoor sports.
- Usable directly as undergarment or as additional protection during winter time or in very cold waters.

9° - 18° C
